HOW TO CHECK YOUR LYMPH NODES

What are the aims of this leaflet?

This leaflet has been written to help you to understand more about checking your lymph nodes yourself. It tells you what lymph nodes are, why you should check them and how often you should perform a check. It also explains how to check lymph nodes. At the end of the leaflet there is further information on where you can find out more.

What are lymph nodes?

The Lymphatic System
Lymph nodes are part of the lymphatic system, which is a network of tiny tubes that carry a colourless fluid called lymph through the skin and deeper parts of the body. Lymph fluid contains immune cells (lymphocytes) nutrients and waste materials.

![Image of lymph node positions]

Figure 1. Position of lymph nodes
**Lymphatic Vessels**

It bathes the cells of the skin and internal organs and drains into lymphatic vessels then larger ducts in the neck before joining the blood stream near the heart (see Figure 1).

**Lymph Nodes**

Lymph nodes (‘glands’) are small oval nodules and contain millions of infections fighting lymphocyte cells. They are found at intervals along the lymphatic vessels like ‘beads on a string’ (see Diagram 1). The lymph nodes filter out harmful organisms and abnormal cells before the lymph reaches the blood stream. Lymph nodes can only be felt in certain areas:

- head and neck
- arms
- axilla (armpit)
- inguinal area (groin)
- back of knees

Lymph node are usually too small to feel except in slim people when they can be felt as smooth pea-sized lumps in the groin. Another common exception is when people get a sore throat or an ear infection, which can make the neck lymph nodes enlarged, painful and tender.

Lymph nodes can also become enlarged if cancer cells lodge in them. In this case, they are usually painless.

**Why should you be checking your lymph nodes?**

You may have been diagnosed with a skin cancer that can sometimes spread into the lymphatic system, for example melanoma or squamous cell carcinoma.

A doctor will usually examine the lymph nodes around the location of your skin cancer at check up visits. e.g. if the skin cancer was on your leg then the lymph nodes behind your knee and in your groin, will be felt, or, if the skin cancer was on your face then the nodes around your ears and neck would be examined. The aim is to detect any enlargement of the lymph nodes at an early stage.

Some people are advised to check their lymph nodes between clinic appointments. If you are worried about enlarged lymph nodes, tell your doctor.
or nurse specialist straight away, rather than waiting until your next clinic appointment.

If you are unsure about anything in this leaflet please talk to your doctor or clinical nurse specialist, who can show you how and which lymph nodes to check.

How often should I check my lymph nodes?

Doctors usually advise check your lymph nodes once a month. This can be done at the same time as you check your skin for new or changing moles, lumps and bumps.

**Do not be alarmed if you feel a lymph node (especially if it is tender) as it may be due to an infection, but if it has not gone in a week, contact your doctor or clinical nurse specialist.**

How do I check lymph nodes in the head and neck?

- With your fingertips and a gentle circular motion feel the lymph nodes illustrated
- Start with the nodes in front of the ear (no. 1 in Figure 2) then follow in order finishing just above the collar bone (no. 10 in Figure 2)
- Always check your nodes in this order
- Check both sides for comparison. If you have an enlarged lymph node it may feel firm and the size of a pea or grape.
Figure 2. Location of lymph nodes (green) around the jaw and neck.

Examine in the order shown, starting at no. 1.

Figure 3. How to Check lymph nodes in front of the ear
Figure 4. How to check lymph nodes in the neck

To feel for nodes in the neck (no. 8 in Figure 2):
- Tilt your head towards the side you are examining, this helps to relax the muscle
- Now press your fingers under the muscle

Figure 5. How to check lymph nodes above the collar bone

To check lymph nodes above the collar bone:
- Hunch your shoulders and bring your elbows forward to relax the skin
- Now feel the area illustrated in Figure 5
How do I check lymph nodes in the armpit?

Figure 6. How to check lymph nodes in the armpit; location of lymph nodes in the armpit

Remove top clothing down to the waist to get easy access to the armpits:
- Sit in a comfortable position
- Check each armpit in turn

To check the left side lift your arm slightly then place the fingers of your right hand high into the armpit and then lower your arm.
- Feel in the central area of the armpit

Now move your fingers firmly against the chest wall as follows:
- Along the front border of the armpit
- Along the back border of the armpit
- Feel along the inner border of the arm

Now check the other armpit in the same way.

How do I check lymph nodes in the groin?

There are two areas to feel in the groin (see figure 7):
- Horizontally along the groin crease
- Vertically along the upper thigh
Check both sides.
