

## **BAD/DC Travel Fellowship 2012 to attend the American Society of Photobiology (ASP)**

### **Meeting , Montreal**

Thank you for the award of this bursary with which I was able to attend the ASP in June this year to present my work “UVA1 induces distinct and different epidermal changes to UVB associated with p53, p63 and keratin differentiation in human skin *in vivo*”. I was able to share my research with experts in photobiology and obtain valuable ideas with which to strengthen my work for publication as well as possible other experiments for further work.

The ASP was an enjoyable and stimulating academic meeting with many lectures and talks describing new work in my current academic field of photobiology/photodermatology. It provided a way of broadening my understanding of the speciality which will hold excellent stead for me in the future. At the ASP I also strengthened my network links with the photobiology department at Sydney Medical School and have been invited to present my research in Sydney, Australia next year at their photobiology conference.

Thank you again for the privilege of being awarded this bursary.

Warm regards

Dr Angela Tewari
